Weird Hardware Gets You Noticed

WhiskerFrame, the Improvised Exciting Device

Lyra Phasma

Software Dev, DPO @ Klik-A-Snap

Sysadmin, Cyberdeck Gremlin @ Heart

@ Hack & Yap Ep. II — Zero-Ten Park, Makati

🕑 2:00 AM: Doomscroll Loop

- Pillow feels like quicksand
- Brain cells melting into vertical video sludge
- Willpower is at `0%`
- Discipline died in 2024

💡 The Hypothesis

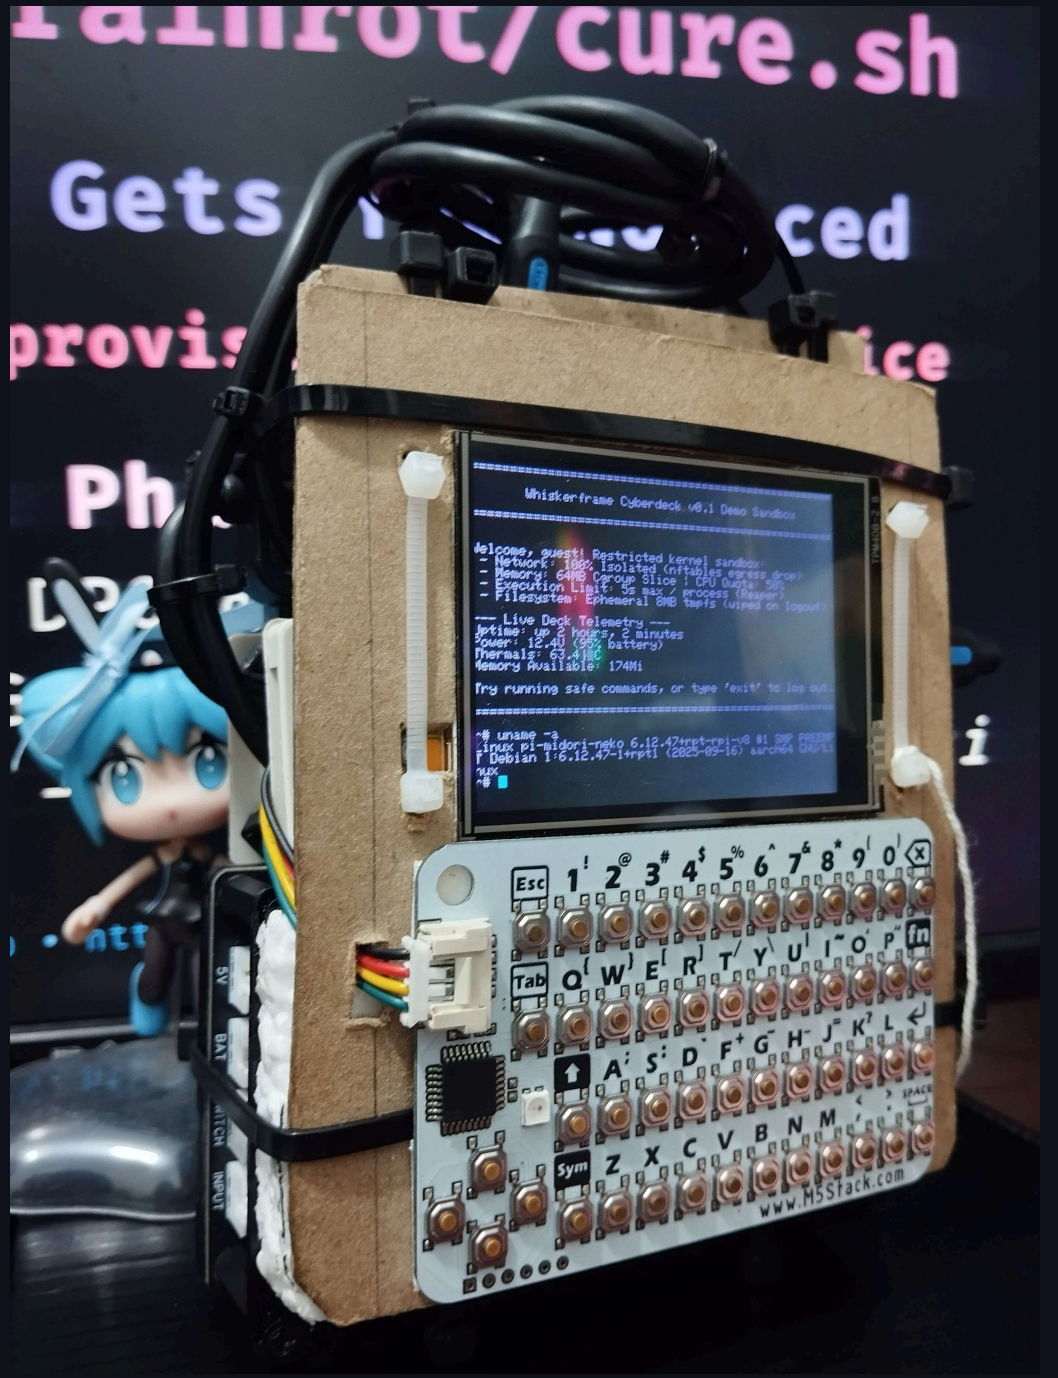

You cannot out-willpower an infinite algorithm.

The cure isn't discipline.

It's having something weird on your desk you'd rather poke at.

📦 Meet WhiskerFrame

- Tiny computer board, screen, clicky keys *(Pi Zero 2W, ESP32 CYD, CardKB)*
- Runs Linux, smells of solder and caffeine

💣 Why "IED"?

Improvised **E**xciting **D**evice

- Zip ties, chipboard, exposed nest of wires
- Movie C4 prop
- Security feature: appearance alone deters people from touching it
- P.D. No. 1727 of PH

 AWS Build Over Nights

- Pitch didn't win. Ready to head home defeated.
- Mentor pushed me to pull out cyberdeck in lobby.
- **"CUT THE RED WIRE!"**
- Commotion grew to 30 people gathering round.

🎟️ AWS Builder Day 2026

- Lobby hype led straight to an invite.
- **AWS User Group PH** booth manpower.
- Demoed cyberdeck live on venue floor.
- Built with AWS Kiro in under 2 days.

⚡ Why Weird Hardware Works

- Code on GitHub is invisible to passersby.
- **Physical hardware is walk-up-able.**
- Tactile curiosities start conversations software pitches can't.

🤖 AI vs. Human Reality

What AI Did ✨	What Lyra Suffered 😭
FastAPI boilerplate & Python models	Which wires talk? *(I2C-0 vs I2C-1 pin routing)*
Inverted screen boot colors backwards	Stiff neck staring up; rigged OBS camera to view screen
Ansible playbooks for setup	512MB RAM Pi died on Docker; wrote native systemd script

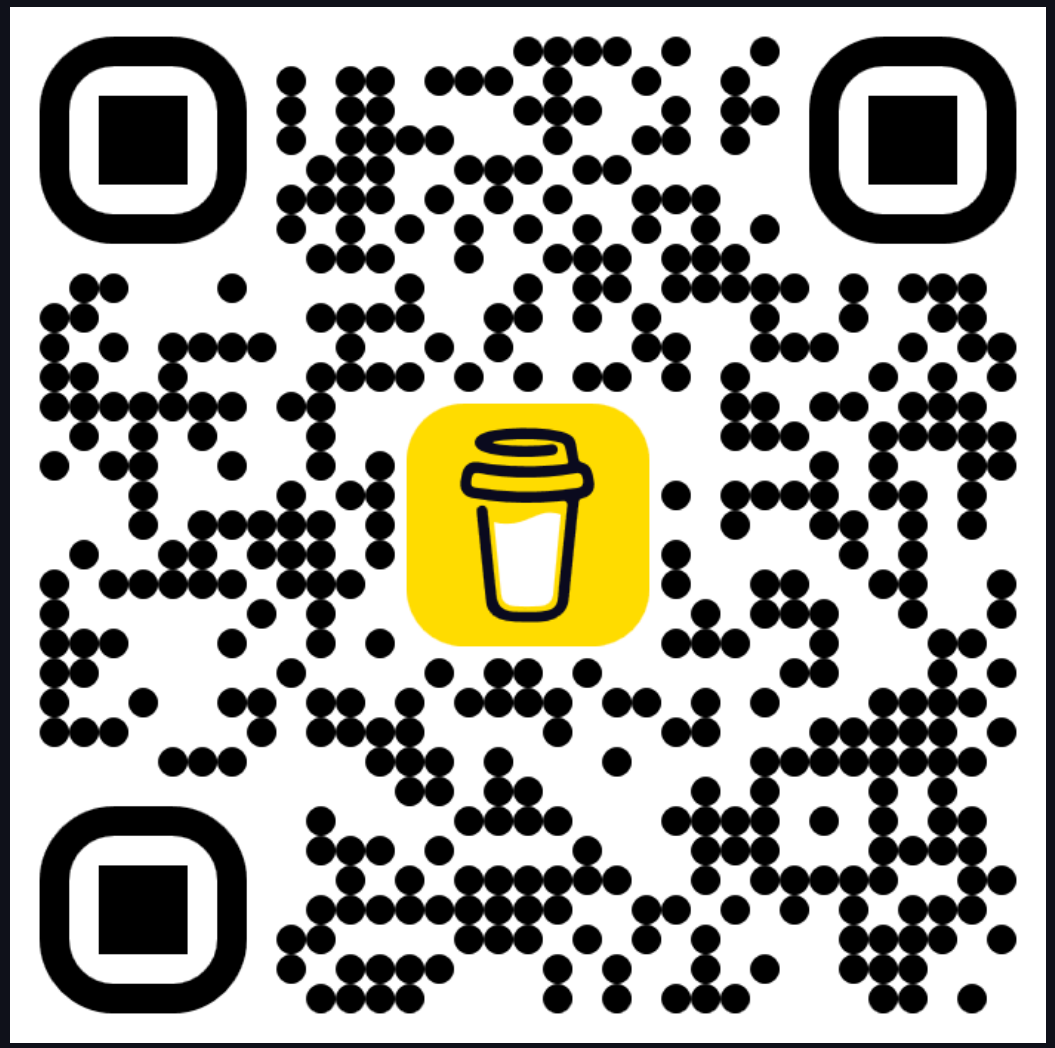

🧪 Did It Cure Brainrot?

- **Replaced phone yet?** Not yet.
- **Result so far:** Tinker way more at my desk.
- **Verdict:** Hard to doomscroll at 2 AM when your hands are full of wires.

🔓 Everything. Open. Source.

- Firmware, software, scripts
- BOM, hardware, 3D case models
- Docs, online *AND* offline
- **Free forever.** *(Free as in freedom, not as in I eat.)*

The Ask

- **v1 kit:** a proper case. It will *NOT* look like a bomb.
- Parts, tools, and time to make v1 real
- $1 / ~₱60 = you pick the boot-splash message :3

Help me keep this free for everyone, forever.

🎯 Takeaways

1. **Tactile friction beats willpower.**
   Put something physical on your desk.
2. **Physical builds get noticed.**
   Make projects people can walk up to.
3. **Rebel against the feed.**
   REVEL IN FOSS! :3

Thank you besties! ✨

Now go touch grass
(or wire an I2C sensor).
